

## DATA SET DESCRIPTION

### *Annual grids of number of days with precipitation >= 30 mm over Germany*

#### Version v1.0

**Cite data set as:** DWD Climate Data Center (CDC): Annual grids of number of days with precipitation >= 30 mm over Germany, version v1.0.

#### INTENT OF THE DATASET

This describes the freely available data of the DWD Climate Data Center. Grids are derived from DWD stations and legally and qualitatively equivalent partner stations in Germany run for climatological and climate related applications.

#### POINT OF CONTACT

Deutscher Wetterdienst  
CDC - Vertrieb Klima und Umwelt  
Frankfurter Straße 135  
63067 Offenbach  
Tel.: + 49 (0) 69 8062-4400  
Fax.: + 49 (0) 69 8062-4499  
Mail: klima.vertrieb@dwd.de

#### DATA DESCRIPTION

<b>Spatial coverage</b>	Germany
<b>Temporal coverage</b>	01.01.1951 - last year
<b>Spatial resolution</b>	1 km x 1 km
<b>Temporal resolution</b>	annual
<b>Projection</b>	3-degree Gauss-Kruger zone 3, Ellipsoid Bessel, Datum Potsdam (central point Rauenberg), EPSG:31467, see <a href="http://spatialreference.org/ref/epsg/31467/">http://spatialreference.org/ref/epsg/31467/</a> . To define the spatial projection in GIS, the file <a href="https://opendata.dwd.de/climate_environment/CDC/help/gk3.prj">https://opendata.dwd.de/climate_environment/CDC/help/gk3.prj</a> can be used. Help is given on importing into ESRI ArcGIS in <a href="https://opendata.dwd.de/climate_environment/CDC/help/Hilfe_Gauss-Krueger-Raster2GIS.pdf">https://opendata.dwd.de/climate_environment/CDC/help/Hilfe_Gauss-Krueger-Raster2GIS.pdf</a> .
<b>Format(s)</b>	The file in ESRI-ascii-grid-format has in the header the coordinates for the lower left grid cell, including the definition of its center [XLLCENTER],[YLLCENTER] or its corner [XLLCORNER],[YLLCORNER]. It contains a table of 654 x 866 numbers. Each row goes from West to East. The first row is the northernmost one (654 values with 4 digits). Missing values are marked with -999.
<b>Parameters</b>	Number of days with precipitation >= 30 mm.
<b>Uncertainties</b>	Uncertainties are caused by the interpolation method, and erroneous or missing observations. When comparing grid fields for different years, it should be considered that the measurement network has changed over time.

#### DATA ORIGIN

The grids are based on the DWD station data [Kaspar et al., 2013]. The gridding method is based on Inverse Distance Weight (IDW), see Müller-Westermeier, 1995: the station observations are interpolated horizontally to cover the grid (weighted with the inverse square distance).

## VALIDATION AND UNCERTAINTY ESTIMATE

The given resolution of 1 km x 1 km is the resolution of the employed digital height model. The gridded data miss processes relevant for local climate (like urban heat island or cold air pools) which are not covered by observations of the station network or cannot be reproduced by the gridding method explained above. The actual information density depends on the station network.
